VIVO Overview

Semantic & Open Web Research Discovery Platform

Office of Research Information Services

Shawn Medero
Platform and User Experience Program Lead

Introductions

1. What is VIVO?
2. Why VIVO?
3. ORIS Implementation Strategy

VIVO is an open, semantic web research and scholarship discovery tool built by the university community

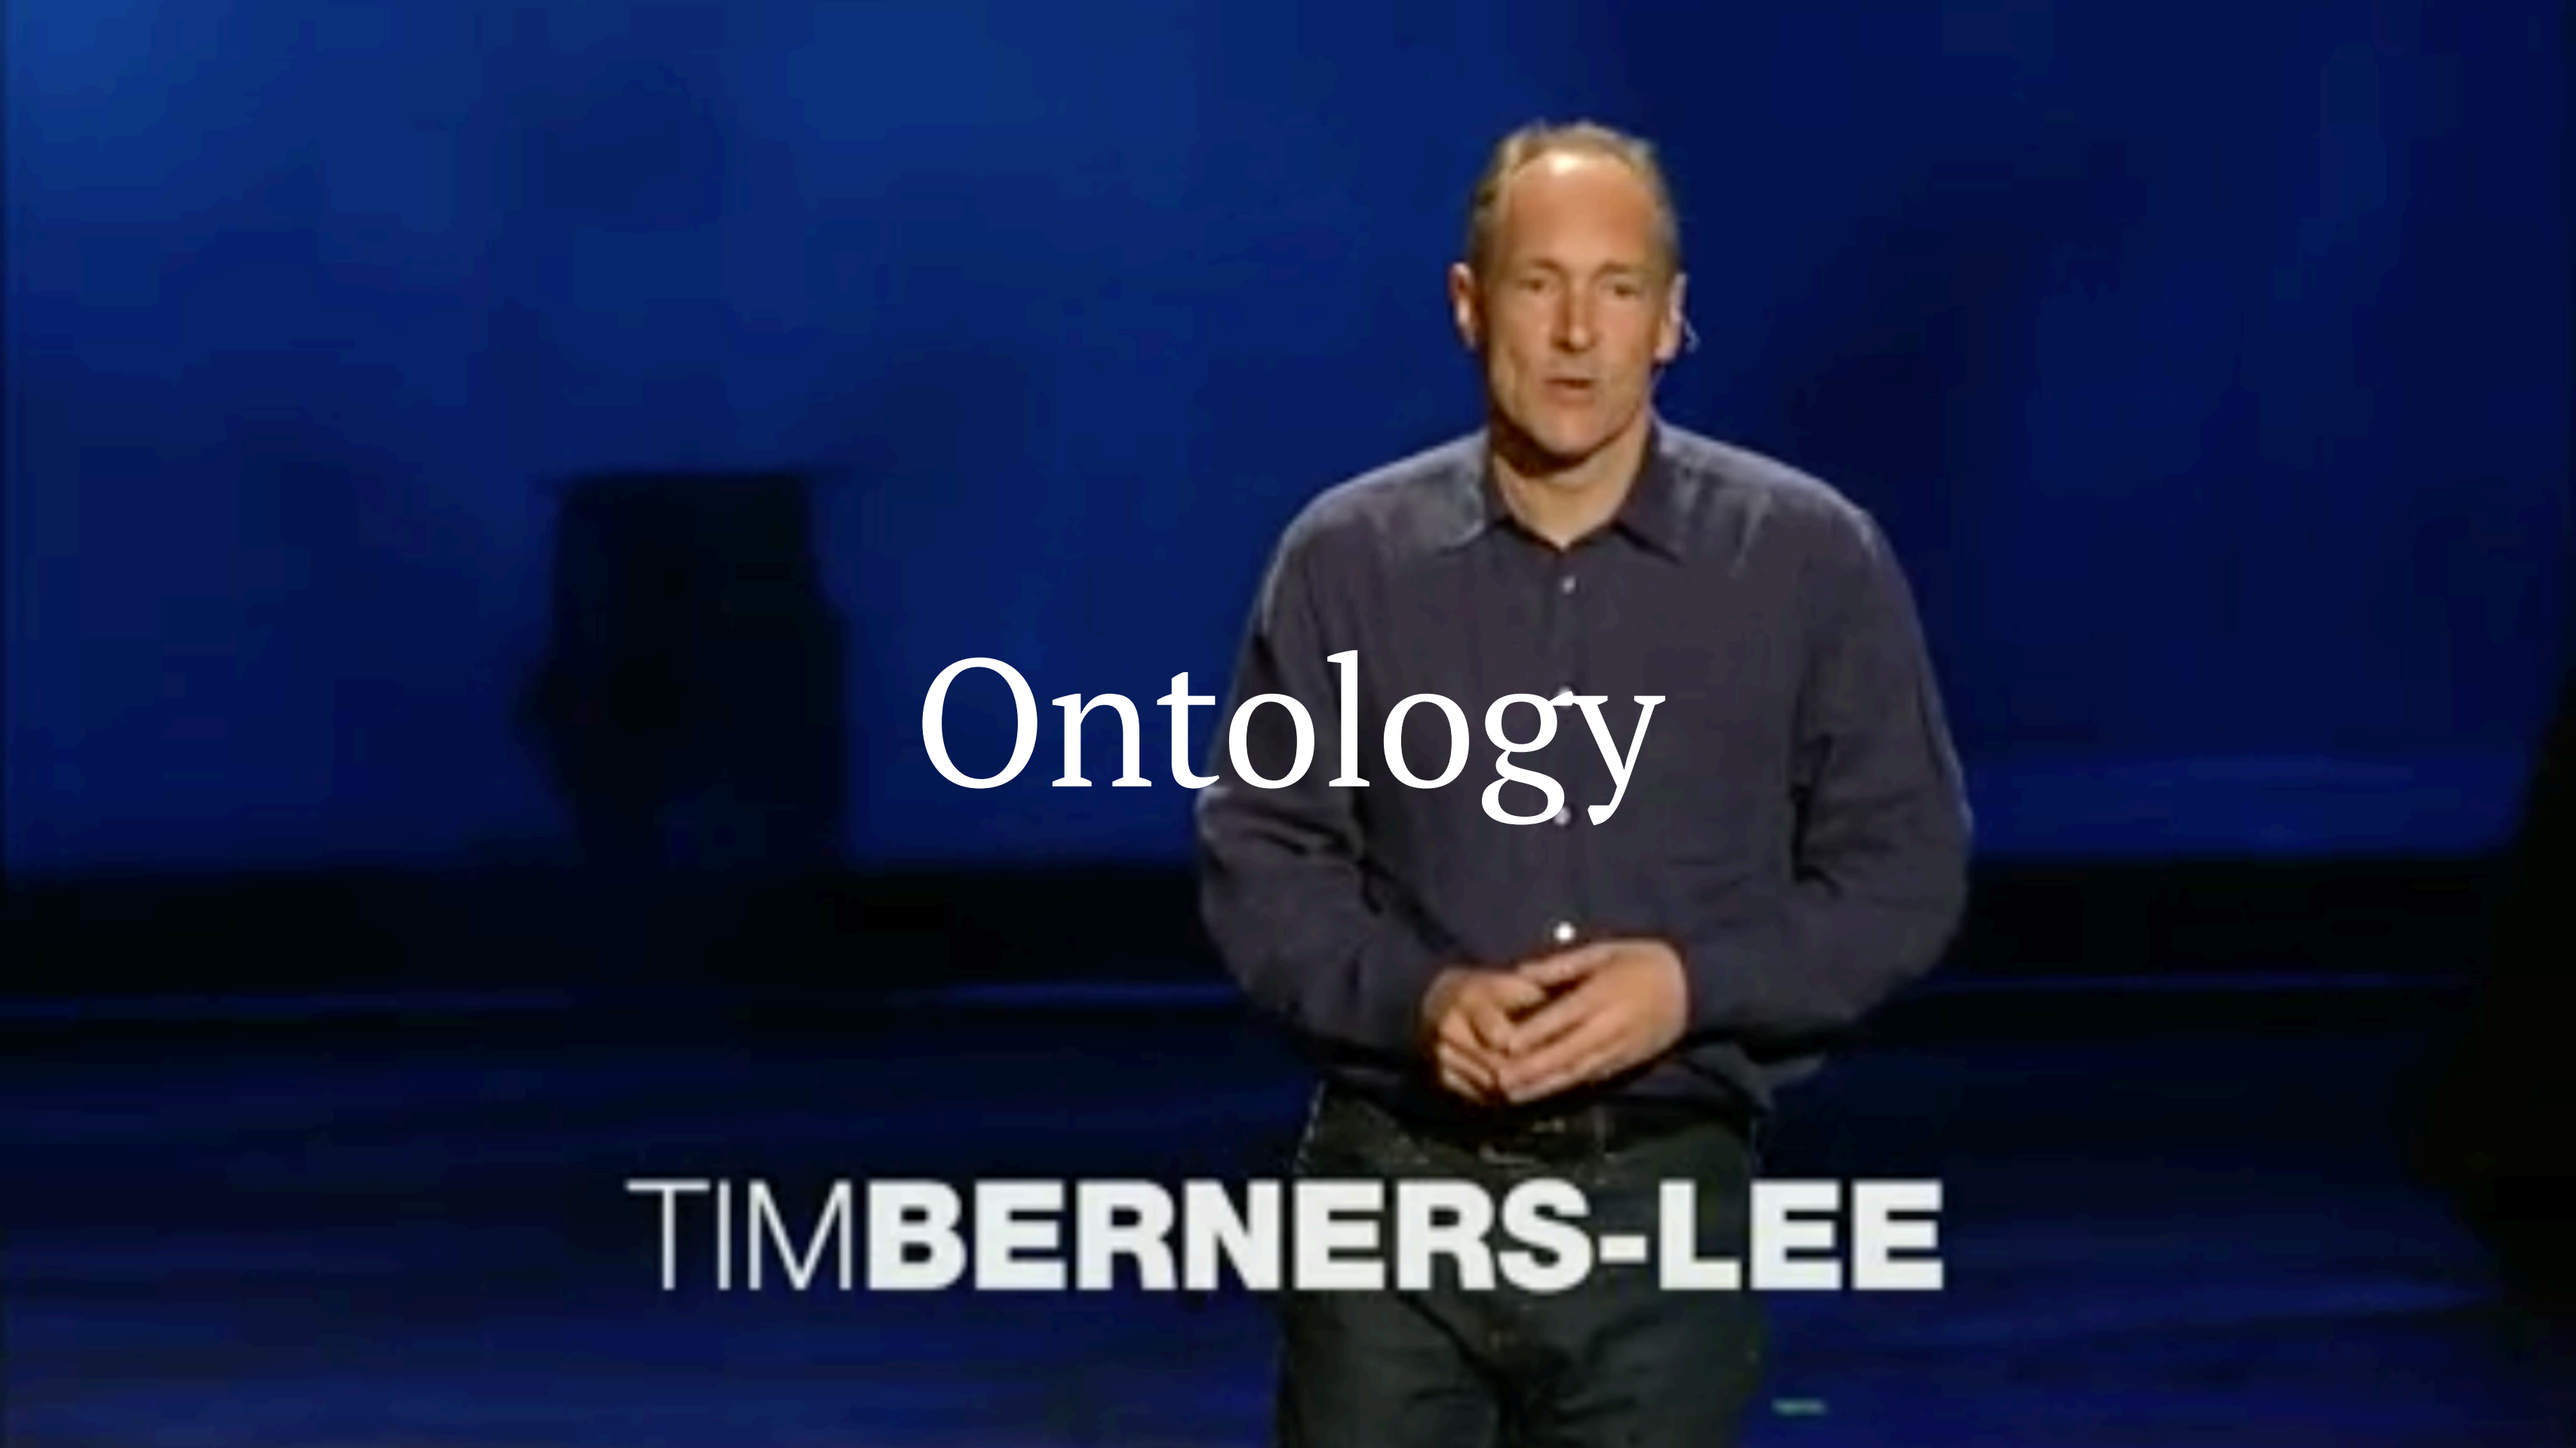
Major Contributors

- Cornell University
- Indiana University
- Scripps Research Institute
- University of Colorado Boulder
- University of Florida
- Washington University in St. Louis

VIVO is **two** things:

1. An ontology
2. A piece of software

Ontology



Defines *concepts* and *relationships*

- Dublin Core
- FOAF
- MeSH
- GeoNames
- VCard
- SKOS

VIVO Ontology

Describes people, organizations, and research resources in the process of doing research. Resources include grants, programs, projects, publications, events, facilities, etc.

— Integrated Semantic Framework (ISF)
— Consortia Advancing Standards in Research Administration Information (CASRAI)

VIVO Software

Open source software that is installed locally at the institution.

- Linux
- Java/Tomcat
- Solr Lucene
- MySQL
- Shibboleth

Project Team Roles

- System Administrator
- Database Administrator
- Data ("ETL") Specialist
- Java Developer
- Web Developer
- Project Management
- User Training

Integrates with multiple data sources

- HR — people, appointments
- Research administration: grants & contracts
- Registrar — courses
- Faculty reporting system(s)
- Publications, service, research areas, awards
- Events calendars, internal and external news
- External repositories — e.g., NIH RePORTER, Pubmed, Scopus

Records can be reviewed and edited by the PI or designated proxies

Benefits

- Common data definitions
- Discovery via search
- Distributed curation
- Data that is visible gets fixed
- Data coordination across functional silos
- Available for reuse at many levels
- Affiliations beyond what central systems (e.g. HR) tracks

1. Federal biosketch project, SciENcv, will integrate with VIVO to pull data from institutions and reduce manual re-entry
2. Every major researcher profile vendor (Elsevier, Thomson-Reuters, InfoEd, etc) is on record as saying they will integrate with VIVO

VIVO in the Wild

- Cornell
- Colorado Boulder
- Scholars@Duke
- VIVO Search

Ahn, Natalie | Professor and Howard Hughes Medical Institute Investigator

Positions

- Professor, Chemistry and Biochemistry

Research Areas

Biochemistry | Biochemistry, Proteins | Mass Spectrometry

Email

Webpage

Research | Background | International Activities

Research

keywords

Signal transduction pathways in cancer, Melanoma mechanisms of drug resistance, Functional proteomics, mass spectrometry, bioanalytical studies of proteins, protein chemistry

Background

education and training

Ph.D., University of California–Berkeley 1985

International Activities

global connections related to teaching and scholarly work (past 3 years)

Australia and New Zealand

Israel

South Korea

Education and Training

Selected Federal Grants

Large Scale Development of Sensors for Imaging Small GTPase Signals in Synapses awarded by National Institutes Of Health 2011 - 2013

Imaging signal transduction in single dendritic spines awarded by National Institutes Of Health 2009 - 2013

Mechanisms of Ras signaling in single synapses awarded by National Institutes Of Health 2007 - 2013

Signaling Mechanisms for AMPA Receptor Trafficking awarded by National Institutes Of Health 2001 - 2012

Spatial compartmentalization of Ras-MAPK signaling by KSR1 in neurons awarded by National Institutes Of Health 2009 - 2010

Imaging Spatiotemporal Kinetics of Activity Dependent AMPAR Trafficking awarded by National Institutes Of Health 2009 - 2010

Recent Courses

NEUROBIO 393: Research Independent Study Instructor

NEUROBIO 793: Research in Neurobiology Instructor

ORIS Implementation Strategy

1. Implement the VIVO software as an information service bridge
2. Identify and implement reproducible automated data ingest to VIVO
3. Establish data and service governance for the VIVO service
4. Establish operational requirements and implement on-going services
5. Promote VIVO through an outreach program to students, faculty and staff

Implementation Timeline

- December 2013 — Completed proof–of–concept
- Spring Quarter 2014 — Creating profiles taskforce
- Summer Quarter 2014 — Pilot kick-off

Open Issues / Questions

- Dirty data
- Lack of common definitions
- Ownership
- Opt–in/Opt–out & Privacy
- **How/When to leverage & promote ORCID**
